Technical Skills

Languages: Java, Python, C, JavaScript/TypeScript, SQL, HTML, CSS, Assembly, R, Markdown

Frameworks: Spring Boot, React, Next.js, Tailwind, Node.js, Express.js, FastAPI, SmartGWT

Developer Tools: Linux, Git, GitHub, Docker, Postman, Visual Studio Code, Eclipse, Cursor, PyCharm, RStudio, Jira

Databases: Microsoft SQL Server (SSMS), SQLite, PostgreSQL, MongoDB, Supabase, DBever

Education

Wilfrid Laurier University

Waterloo, ON

Bachelor of Science in **Computer Science**, Minor in Statistics, Co-op Program

Sep. 2023 – Present

- **Clubs:** Laurier Computing Society, Laurier Cybersecurity Club
- **Coursework:** Data Structures 1 and 2, Object-Oriented Programming, Software Engineering, Algorithm Design, Operating Systems, Networks, Machine Learning, Microprocessors, Advanced Calculus (1, 2, and 3), Linear Algebra

Experience

Software Developer

May 2026 – Aug. 2026; Sep. 2025 – Dec. 2025

Ricoh Canada

Kitchener, ON

- Improved operator workflows in **CloudStream**, a cloud-based print management platform, by completing multiple **Jira tickets** for full-stack features and bug fixes across a **Java/Spring Boot backend** and **SmartGWT frontend**.
- Ensured correct rendering across localized **CloudStream** views by resolving database-driven tickets through **SQL Server** updates in **SSMS** and validating the **SmartGWT UI**.
- Streamlined onboarding for **co-op students and team members** by authoring technical documentation for connecting **local Java development environments** to in-office printers, making setup procedures repeatable.

Utility Locate Technician

Apr. 2024 – Aug. 2025

Utility Marx

Hamilton, ON

- Automated **internal systems** using **JavaScript** to streamline ticket processing and dispatch workflows, improving efficiency and daily ticket completion for a **15-person field team**.
- Provided remote **IT support** by accessing **company laptops** to assist employees across Ontario with **software updates** and **FRA installations**, ensuring reliable record keeping for quality locates.
- Precisely identified and marked underground utilities (**gas, water, electric, telecommunication**) using advanced equipment, ensuring safety and accuracy of **excavation projects**.

Projects

🐙 CVLens | Web Application

Python, JavaScript, Next.js, Tailwind, FastAPI, spaCy, Docker, Git

- Developed a **web app** that extracts structured data from uploaded resumes (**PDF/DOCX**) to automate the application process, eliminating the need for manual data entry.
- Built an **NLP model using spaCy with NER** to extract contact information, education, skills, and work experience, and created a dataset of **200+** resumes.
- Built a **RESTful API with FastAPI** to process uploaded resumes using **NLP** and serve structured **JSON** responses.
- Developed a responsive **Next.js frontend** to support resume uploads and visualize extracted data through a clean, **interactive UI**.

🐙 Roomify | Web Application

TypeScript, Next.js, Tailwind, Express.js, Node.js, MongoDB, Postman, Git

- Developed and shipped a fully functional **full-stack TFSA tracking app** (Roomify) in **under 24 hours** using the **MERN** tech stack (MongoDB, Express.js, React/Next.js, Node.js).
- Streamlined transaction management by designing **RESTful APIs** with Express, testing with **Postman**, and integrating frontend forms for deposits, withdrawals, and real-time room calculations.
- Built secure user authentication by implementing **JWT tokenization** and password hashing with **bcrypt**, enabling safe login/registration workflows.
- Created a modern, mobile-responsive dashboard UI inspired by Twitter's dark mode, featuring interactive cards, smooth transitions, and clean component design with **Next.js and Tailwind**.

🐙 MarxPDF | Web Application

JavaScript, React, HTML, CSS, pdf-lib, Git

- Shipped a **web app** to **automate PDF form filling**, streamlining the manual process at Utility Marx and **boosting productivity** and **daily ticket completion** for **40+** employees; later **brought on to automate additional internal systems** after successful adoption.
- Utilized **pdf-lib** to read, manipulate, and populate data in PDFs based on predefined ticket input data from dispatch.
- Designed a clean, **user-friendly frontend with React**, allowing users to trigger the **PDF filling process**.
- Used **Git** for version control, ensuring smooth collaboration and development throughout the project.
